

COLLINS YOULDON CATHERINE REELS

The Collins Youldon series of catherine reels for fuel oil delivery has been extensively fitted to road tankers throughout the UK and is highly reliable and proven in service.

The 'Standard' model has a larger hose capacity whereas the 'Slimline' model has been developed where space between the tank and cab is restricted. The drip tray can be supplied in two lengths to suit different widths of vehicle.

Both models are available with either electric motor rewind with electromagnetic clutch (HR32-E) or mechanical clutch (HR32-M), hydraulic motor rewind with direct (HR32-H) or chain drive (HR32-HD) or pneumatic motor rewind (HR32-A).

For hose capacities and dimensions, see table overleaf
